

Today, organizations are more or less able to detect cyberattacks. But stakeholders understand that you can't "catch them all" eventually, a breach will occur, and they will need to respond to it. Practicing actual incident response remains critical:

- Cyberattacks continue to get more complex, pervasive, and damaging
- Human involvement in breach and incident response isn't going anywhere anytime soon
- You cannot become great at responding to a major breach, if you've never done it before

S4.3M+

cost of a major cyber <u>breach</u> or incident

\$2.7M+

robust incident response plan

Of enterprises test IR plans <u>quarterly</u> or more often

Detecting breaches isn't the same as efficiently responding to them, and constant practice is the only way.

# Bring Cyber Breach Response Training Into the 21st Century.

ORNA is an Al-driven cyber crisis simulation platform for all business functions that translates simulation learnings into real and fully implemented incident/breach response automations - at a fraction of the cost and effort of a typical crisis simulation.

## Mirror your environment

Easily create an interactive, risk-scored "clone" of your organization's cloud, hybrid, or on-premises infrastructure In under 10 minutes.

# Simulate a breach of any type & complexity

ORNA's proprietary Theia Al allows to easily configure and simulate 1,000s of fully customizable breach scenarios.

Launch simulations anytime and practice all kinds of crises.

# **Practice real** incident response across all of your business functions

Each scenario includes actions,

A real breach requires everyone's

# Tackle cyber breaches like a pro. Start today.

# Join 500+ happy teams in 11 countries

We have been with ORNA for over a year now and I have to comment on my experience. Their guidance and support, and response to any issues we have or spotting an issue before it hits us is critical to the way we operate today and in the future. I am thankful that we have partnered with them for our cyber security.

### **Elliott Steele**

IT Director, Powell Group of Companies

Orna Incident Management gives me and my directors confidence that if we were to sustain a cyber attack, we can react confidently with the added comfort of knowing an ORNA specialist is available 24/7.

ORNA allows the ability to have high-end capability with the added advantage of being simple to use when responding to phishing incidents. It gives my team the confidence in containing a more significant cyber security incident if we ever fell victim to an attack.

A great platform for incident responders and security teams that manage security alerts and need to track an incident start to finish. You'll be hard pressed to find a similar product (trust me, I've looked) and the pricing doesn't alienate the SMB market like most security products.

## \*\*\*

Great functionality, especially for SMEs that have limited or relatively inexperienced/new security teams. Some of the decisions needed in IM may not be binary and so the ORNA team are continuously improving the service to align with customer feedback. As such, the easy to understand user interface and functions will mature and grow with customers - a true partnership based approach.

### **Andrew Giles**

of Security and Resilience, Nationwide Building Society

In the first month of operating with the ORNA platform, Indeloy has been able to identify our most targeted assets, which in turn has enabled us to plan a bespoke table top exercise with the ORNA Inc team. On top of this, the team are friendly, professional and supportive and have made navigating critical issues a less stressful experience and we are grateful to be working with them.

### Jamie Sleigh

Director, Indelov

Have worked with some of these folks for 3+ years, and with ORNA itself for a few months. Can't speak highly enough of their commitment to service and professionalism. ORNA is a terrific product and is only getting better. Essential for anyone who needs to get a handle on their cyber-security approach and activities but doesn't feel like getting ripped off by the 'big names' in the space.
